TEST REPORT

EN IEC 62368-1

Audio/video, information and communication technology equipment

Part 1: Safety requirements

Echo Zhon

Report Number....: RKEYS250731240

Total number of pages..... 81 pages

Tested by (name + signature).....: Echo Zhong

Approved by (name + signature)...: Jason Zhan

Testing Laboratory Name..........: Guangdong KEYS Testing Technology Co., Ltd.

Building 1, No.18, Shihuan Road, Dongcheng Subdistrict, Dongguan,

Address...... Guangdong, China

Applicant's name...... Mid Ocean Brands B.V.

Unit 711-716, 7/F., Tower A, 83 King Lam Street, Cheung Sha Wan,

Kowloon, Hong Kong

Manufacturer's name...... 117486

Address.....: N/A

Test specification:

Standard.....: EN IEC 62368-1:2024/A11:2024

Test procedure....: Safety report

Non-standard test method.....: N/A

Test item description....: Wireless charger

Trade Mark..... N/A

Model/Type reference...... MO2651

Input:DC 5V 2A,9V 2A

Ratings.....: Wireless output: DC 5V 1A, 7.5V 1A 9V 1.1A, 9V 1.67A

(15W Max)

Report No.: RKEYS250731240 Date: Aug. 13, 2025 Page 2 of 81

General disclaimer:

This report is only for applicant use. Any copying this report to/for any other person or entity, and use our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Unless specific mention, the uncertainty of measurement has been explicitly taken into account to declare the compliance or non-compliance to the specification

List of Attachments:

- Measurement Section
- Attachment No.1: European National Differences. (30 pages)
- Attachment No.2:Photo document (3 pages)

Total number of pages in each attachment is indicated in each individual attachment.

Summary of testing:

The tested samples fulfilled the requirements of specified standards.

Testing location:

Guangdong KEYS Testing Technology Co., Ltd.

Building 1, No.18, Shihuan Road, Dongcheng Subdistrict, Dongguan, Guangdong, China

Summary of compliance with National Differences:

List of countries addressed:

European National Differences.

☐ The product fulfils the requirements of **EN IEC 62368-1:2024/A11:2024**

Remark:

Report No.: RKEYS250731240 Date: Aug. 13, 2025 Page 3 of 81

Copy of marking plate:

The artwork below may be only a draft.

Wireless charger

Model: MO2651

Input:DC 5V 2A,9V 2A

Wireless output: DC 5V 1A, 7.5V 1A 9V 1.1A, 9V 1.67A

(15W Max)

Mid Ocean Brands B.V. MADE IN CHINA

Importer: xxx Address: yyy

Note:

- 1. xxx means importer company name; yyy means importer company address information.
- 2. The marking for the other models are identical as above except the model no. only.
- 3.As declared by client that the name (or registered trade mark) and address of the certificate holder (manufacturer) or the importer or authorized representative based within the European Economic Area will be clearly affixed on the product or where that is not possible, on the packaging or in a document accompanying the product.
- 4. The height of letters and numerals was not less than 2mm.
- 5. The height of symbol " was not less than 7mm.
- 6. The height of the other graphical symbols was not less than 5mm.

Normal		(10°			PS3(declaration)
		0	JA1	9	
Normal	9	1.67	15	5	PS2(declaration)
166			-		1025
				9 00	9 00

Supplementary information:

1) Measured after 3 s for PS1 and measured after 5 s for PS2 and PS3.

6.2.3.1	TABLE: Determin	0.65	N/A		
Location		Open circuit voltage	Measured r.m.s	Calculated value	Arcing PIS?
		after 3 s (Vpk)	current (A)		Yes / No
	(0)	A.60		(5

Supplementary information:

- 1) An Arcing PIS requires a minimum of 50 V (peak) a.c. or d.c. An Arcing PIS is established when the product of the open circuit voltage (V_p) and normal operating condition rms current (I_{rms}) is greater than 15.
- 2) All primary circuit/components were considered as arcing PIS, the max. open circuit voltage of output for all models were not exceeded 50V.

6.2.3.2	TABLE: Determin	ABLE: Determination of resistive PIS							
Location		Operating and fault condition	Dissipate power (W)	Arcing PIS?					
				Yes / No					
Input termina	al		(6)	Yes					
1	ř	20		(Declared)					

Supplementary information:

- 1. All primary/secondary components except output terminal were considered as resistive PIS.
- 2. A combination of voltmeter, VA and ammeter IA may be used instead of a wattmeter.

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine Resistive PIS classification.

3. A Resistive PIS: (a) dissipates more than 15 W, measured after 30 s of normal operation, <u>or</u> (b) under single fault conditions has either a power exceeding 100 W measured immediately after the introduction of the fault if electronic circuits, regulators or PTC devices are used, or has an available power exceeding 15 W measured 30 s after introduction of the fault.

10.6.2	Classification of devices without the capacity to	estimate sound dose	N/A
10.6.2.1	General This standard is transitioning from short-term based (30 s) requirements to long-term based (40 h) requirements. These clauses remain in effect only for devices that do not comply with sound dose estimation as stipulated in EN 50332-3:2017. For classifying the acoustic output <i>L</i> Aeq, <i>T</i> , measurements are based on the A-weighted equivalent sound pressure level over a 30 s period. For music where the average sound pressure (long	Caro Caro	N/A
0359 1	term <i>L</i> Aeq, <i>T</i>) measured over the duration of the song is lower than the average produced by the programme simulation noise, measurements may be done over the duration of the complete song. In this case, <i>T</i> becomes the duration of the song. NOTE Classical music, acoustic music and	Caro Caro	E

automatically reduce the sound level not to exceed 100 dB(A) or 150 mV integrated over the past 180 s, based on methodology defined in EN 50332-3:2017. The EL settling time (time from starting level reduction to reaching target output level) shall be 10 s or less. Test of EL functionality is conducted according to EN 50332-3:2017, using the limits from this clause. For equipment provided as a package (player with its listening device), the level integrated over 180 s shall be 100 dB or lower. For equipment provided with a standardized connector, the un-weighted level integrated over 180 s shall be no more than 150 mV for an analogue interface and no more than −10 dBFS for a digital interface. In case the source is known not to be music (or test signal), the EL may be disabled. 10.6.6 Requirements for listening devices (headphones, earphones, etc.) 10.6.6.1 Corded listening devices with analogue input With 94 dB L/Aeq acoustic pressure output of the listening device, and with the volume and sound settings in the listening device (for example, built-in volume level control, additional sound features like equalization, etc.) set to the combination of positions that maximizes the measured acoustic output level, the input voltage of the listening device when playing the fixed "programme simulation noise" as described in EN 50332-1:2013 shall be ≥ 75 mV. NOTE The values of 94 dB and 75 mV correspond with 85 dB and 27 mV in 10.6.2.2. or 100 dB and 150 mV in 10.6.2.3. 10.6.6.2 Corded listening devices with digital input With any playing device playing the fixed "programme simulation noise" described in EN programme simulation noise" described in EN programme simulation noise of described in EN programme simulation noise described in EN programme simulation noise of described in EN programme simulation noise of described in EN		0.62		(4
starting level reduction to reaching target output levely shall be 10 s or less. Test of EL functionality is conducted according to EN 50332-3:2017, using the limits from this clause. Report No.: RKEYS250731240 Date: Aug. 13, 2025 Page 72 of 81

compound completely filling the casing, so that clearances and creepage distances do not exist, if the component passes the electric strength test in accordance with the compliance clause below and in addition

- passes the tests and inspection criteria of 5.4.7 with an electric strength test of 1,5 kV multiplied by 1,6 (the electric strength test of 5.4.9 shall be performed using 1,5 kV), and
- is subject to routine testing for electric strength during manufacturing, using a test voltage of 1,5 kV.

It is permitted to bridge this insulation with a capacitor complying with EN 60384-14, subclass Y2.

A capacitor classified Y3 according to EN 60384-14, may bridge this insulation under the following conditions:

- the insulation requirements are satisfied by having a capacitor classified Y3 as defined by EN 60384-14, which in addition to the Y3 testing, is tested with an impulse test of 2,5 kV defined in 5.4.10;
- the additional testing shall be performed on all the test specimens as described in EN 60384-14;
- the impulse test of 2,5 kV is to be performed before the endurance test in EN 60384-14, in the sequence of tests as described in EN 60384-14.
